Portable, Seekable Random Streams for Parallel CPU Simulation

Parth Kumar Sinha

Independent researcher, Oxford, United Kingdom
sinhaparth555@gmail.com
ORCID 0009-0002-3120-9301

Sole author and corresponding author. No funding was received for this research.

Conflict of interest

Section 1 quotes, verbatim, a review comment that declined a proposal to make the serialized generator state of XGBoost portable across platforms. I submitted that proposal. The anonymized manuscript records in a footnote that the authors are not independent of the exchange and points here for the name.

The quotation is kept verbatim because the evaluation in this paper exists to answer it. All measurements reported were made after that exchange, and Section 10 states the cases in which they do not support the design.

Software and data

The Availability section of the anonymized manuscript withholds these two identifiers, because both carry my name. Please pass them to reviewers.

Repository, MIT or Apache-2.0:
`https://github.com/sinhaparth5/vphilox`

Archived release measured in this paper:
doi:10.5281/zenodo.22103483

Every benchmark is reproducible from the archived JSON and the scripts in that repository. The derived tables and figures are regenerated by a single command that continuous integration verifies, and every PractRand and TestU01 log carries the git SHA of the binary that produced it.
